**write
your
world**

**a word from
Pilot Group
president.**

Hello everyone!

The outlook for global economy remains uncertain due to some factors such as geopolitical risks like protracted conflict in various regions, continued inflation in Europe and the U.S., and impact of the prolonged slowdown in the Chinese economy.

Under the such situation, for 2024, we had been restructuring our organization and frameworks based on our Group Purpose of “Our creations Inspire Creativity”, with the “2030 Vision” and the “2022-2024 Medium-Term Management Plan”. We have also focused on improving management efficiency and governance, as well as advancing activities aimed at realizing a sustainable society.

For the fiscal year 2024, it has become the highest record in consolidated sales thanks to all the efforts and due to impact of exchange rate. On the other hand, operating profit decreased due to personnel, depreciation and other expenses increase.

In 2025, we step up from the 2022-2024 Mid-term management plan, which was positioned “Change and Challenge” aimed at achieving the 2030 vision during these 3 years, to the first year of the 2025-2027 Mid-term management plan, which is positioned as “ceaseless evolution” for strengthening the Group’s management foundation to adapt to changes.

Under the current Medium Term Management Plan, we will continue with our basic strategies. To achieve growth in the writing instrument business in the global market, we will deliver “attractive” tools and opportunities that support the value of “writing” and the act of “writing” to people all over the world, thereby maintaining and improving our margin. I would like to share the four management tasks to focus our efforts on with you.

Our top priority management task is to increase the global market share of writing instrument business.

The second is to reinforce the structure of non-writing instrument business.

The third is to find new alliance partners. By developing and collaborating with whom we will be able to grow and generate synergies together, we launch value-added products into new field and accelerate growth.

The fourth is to drive sustainable management of the group. We have 3 points in detail.

The first point is to drive operational reforms from the viewpoint of total optimization.

The second point is to reinforce the group management structure and driving human resource development.

The last point is to reform the global supply chain of writing instrument business.

During the period of this medium-term management plan, operating profit ratio will be sluggish due to increased depreciation and rising material costs associated with investment for growth. However, by working to increase sales by 4-5% each year and controlling costs, we will aim to achieve financial targets of consolidated net sales of 145 billion yen, operating profit ratio of 16% or more, and ROE of 11% or more in the fiscal year ending December 31, 2027, which is the final year of this medium term management plan.

The act of writing is deeply rooted in human culture. It is concerned with thinking, creating and recording. PILOT has been thinking outside the box and developing innovative products, including the Capless, G-2, and Frixion so that people of all generations think and create through writing instruments. Under “Our Creations Inspire Creativity,” we will bring in new ideas flexibly and continue to evolve. Meanwhile, the group will pursue initiatives to achieve sustainable growth and contribute to resolution of environmental and societal issues.

Today, I really feel we have great partners in the world who support PILOT brand and could overcome any difficulties together with all of you. PILOT needs each of you for being a brand which is required by many people for years to come. Without your support, PILOT does not exist.

Thank you very much.

Fumio Fujisaki
President & Representative Director

« to provide everyone in Europe with the greatest writing experience and be the customer's 1st choice »

With PILOT, it's not only about writing.

It's about thinking for yourself, daring to express your thoughts and personality, declaring your convictions to the world. Connecting ideas together, developing a sense of endeavour, trying till succeeding. Saying to someone I love you...

Handwriting has always been a powerful driver, enabling anyone to express themselves the way they want. Especially in the digital age, handwriting offers a more personal link to the world, a physical connection to words and ideas, and thus an opportunity to empower people to express their uniqueness.

As a pioneer and leader driven by a passion for quality, innovation and sustainability, PILOT has provided, for more than 100 years, top quality pens to make the most of your handwriting and achieve what matters.

Whoever you are, a schoolchild, an artist, a worker, a mother, a friend... we care about the colour of your ideas, passions and about who you are.

Because we know it's by writing, drawing, underlining, doodling, ...that you are writing your world. We are proud of what you do with our pens....

WRITE YOUR WORLD.

PILOT.

writing, it's much more than ink marks on a piece of paper...

our ambitions & objectives for 2026.

In the current situation where business is challenging – with strong competition– it is vital for PILOT brand to be present and visible on the shopfloor and in marketing & media activities.

To gain market share we need to become the top-of-mind stationary brand in the minds of our consumers the loyal ones and the ones we would like to recruit.

In 2026, PILOT continues to win hearts and gain ground by doing what it does best: innovating with a host of irresistible new products, appealing to consumers of all ages.

Frixion « Sweet Paradise » and « Pool Party » collections

With these two new collections of Frixion Ball and Frixion Clicker, PILOT aims to attract young schoolchildren and teenagers, especially girls. The cute designs, along with a variety of ink colours, are intended to encourage multiple purchases, ideally inspiring customers to buy the entire collection rather than just a single pen.

Frixion Friends Pens

This collection targets younger consumers. The concept is simple: two pens that “work together.” Just like friendship bracelets, these pens can be shared with friends or enjoyed individually. The goal, as always, is to encourage multiple purchases. With this collection, we’re adding a playful twist to the functional Frixion range. The different Friends pens appeal to both boys and girls.

G-2+

G-2, one of our best- seller is Going Greener and becomes G-2+ ! Sustainability is at the heart of PILOT, and now G-2+ is officially joining our BeGreen family.

This means:

- More sustainability thanks to more recycled materials
- The same high performance, with a lower environmental impact
- A powerful message to eco-conscious consumers

And on top of that, “G-2+ has the longest writing distance of the gel ink pen category”.

A strategic relaunch to keep our position and our sales with this best-seller.

Pop’Lol range

We will be launching 12 colors in this range, which is highly adaptable for a teenage audience. It’s a gel ink pen available in fun colors at a very affordable price. The goal is to retain our loyal young consumers and guide them toward choosing a PILOT pen once they move on from Frixion erasable pens. We know this target group is looking for simple, fun, and affordable solutions. Currently, due to our limited offer in this price category, many of them are switching to competitors’ pens.

This range, already a bestseller in Japan, offers many exciting colors and designs. The launch of these 12 colors is just the beginning... there’s more to come in the coming years.

Frixion Ball+ Heralbonny collection

In line with Pilot’s strong CSR commitments, PILOT is launching a limited edition of Frixion Ball Plus pens featuring four unique designs created by artists with profound disabilities. With this launch, PILOT demonstrates that writing is more than just a pen, while reaffirming its commitment to diversity and inclusion.

G-2 Flow collection

After our Bubble Limited Edition, PILOT is launching the Flow Edition in blue and black ink. This collection is designed to bring fun and style to young, active professionals. With its **playful, surreal, and textured body**, there’s no doubt that the G-2 Flow will appeal to all young professionals seeking trendy accessories.

With these exciting launches, we look forward to a successful 2026, bringing joy, innovation, and inspiration to consumers of all ages, while strengthening PILOT’s presence and leadership in the stationery market!

Committed to writing a better world

For more than 100 years, PILOT has supported the act of writing as a mean of empowering people to express their uniqueness – this is our mission.

CSR is an integral part of Pilot's development strategy and has always been a core focus of the group. Pilot Corporation of Europe has now decided to adopt a sustainability report as an element of planning and control, with the objective of continuous improvement

Committed to writing a better world together...

...is a significant step forward, uniting sustainability with client and partner satisfaction.

Mr Yoshio Wada
CEO, Pilot Corporation of Europe.

For more information : <https://www.pilotpen.eu/csr-commitments/>

OUR CSR COMMITMENTS AT A GLANCE

Today, our CSR approach is based on four pillars, which are...

**write
better
with
less**

Initial life cycle analyses were undertaken in the early 2000's on our main products. Identifying the most impactful steps has allowed us to set out our 4 Rs product sustainability strategy (Recycled material, Reduce, Refill, Reclaim) which has guided our development since.

- /01** Pursue **high quality and reliability** standards.
- /02** Develop **eco-designed ranges through our 4R policy:** Recycled materials, Reduce, Refill, Reclaim.
- /03** Demonstrate **transparency** in our environmental actions and support **climate projects**.

**write
better
with
care**

We make every efforts to monitor and reduce the environmental impact associated with our activities and facilities. We implement action plans on carbon footprint, energy consumption, and waste production. Logistics is also at the core of our concerns, with an ambitious carbon reduction program.

- /01** **Monitor risks** among our value chain and direct our purchase towards **responsible sourcing**.
- /02** Assess and **minimize the impact of production** on the environment.
- /03** Optimize **our supply chain** and minimize its impact.

**write
better
together**

PCE's ambition is to allow each and every person to express their full potential within the company. This is why PILOT is constantly pushing back the boundaries of innovation so that everyone can express their personality and develop their skills within a team.

- /01** **Grow through respect:** provide the right working conditions for the personal and professional fulfilment of all our employees.
- /02** **Grow through improvement:** Nurture talents and provide opportunities to develop their skills and professional career.
- /03** **Grow through actions:** Encourage employees to contribute through practical initiatives for the support of our environmental and societal commitments.

**write
for
well-
being**

We believe in the power of handwriting to empower people to express their uniqueness and to sustain their cerebral faculties. This is why we are committed to supporting the development of cognitive and expressive capacities through handwriting, at all ages.

- /01** Raise awareness of the **benefits of handwriting**.
- /02** Help the development of **cognitive and expressive aptitudes**.
- /03** Participate in the life and well-being of our **local communities**.

write **better with less.**

Develop innovative
eco-designed ranges
based on our 4R Policy.

recycle,

Give maximum priority
to using recycled plastic.

reduce,

Less plastic in our
packaging.

refill,

Change the refill,
not the pen.

reclaim,

Reduce pollution
by collecting plastic
ocean waste.

Since 2006,
we favour recycled plastic in our pen production.

**begreen range
at least 90%**

* >90% recycled plastic (excluding refill and non-plastic components) which is 68% of the total product weight without packaging.

**best sellers
at least 75%**

>75% recycled plastic (excluding refill and non-plastic components) which is 53% of the total product weight without packaging.

**best sellers
at least 60%**

>60% recycled plastic (excluding refill and non-plastic components) *which is 46% of the total product weight without packaging

**begreen range
at least 80%**

* >80% recycled plastic (excluding refill and non-plastic components) which is 60% of the total product weight without packaging.

Switch to cardboard

We reduce the use of plastic by creating fully recyclable packaging.

Over 60% of Pilot ranges are refillable

We promote refill sales with a 2-in-1 offer of pens + refills:
less waste and longer lifespan.

PILOT is adding reclaimed ocean plastic,
to the recycled PET material used in the
manufacture of the iconic B2P range
(Gel and Ecoball).

In partnership
with

Pilot Corporation of Europe

awarded the EcoVadis Gold Medal.

With an overall score of 76/100 : +11 points since the last evaluation, PCE is among the top 5% of companies evaluated by EcoVadis over the last 12 months! This great success is the result of a collective effort of several years from the Pilot teams.

EcoVadis is a global performance assessment platform that rates companies on their sustainable practices in four areas: environment, social and human rights, ethics and responsible purchasing. EcoVadis evaluates over 130,000 companies in 200 sectors and more than 180 countries.

This distinction is a significant step forward, yet it is only the beginning of our long-term journey to strengthen our sustainability practices. The challenges and opportunities in the CSR domain are vast, and we remain committed to driving positive change for the benefit of our customers, partners, and the broader community.

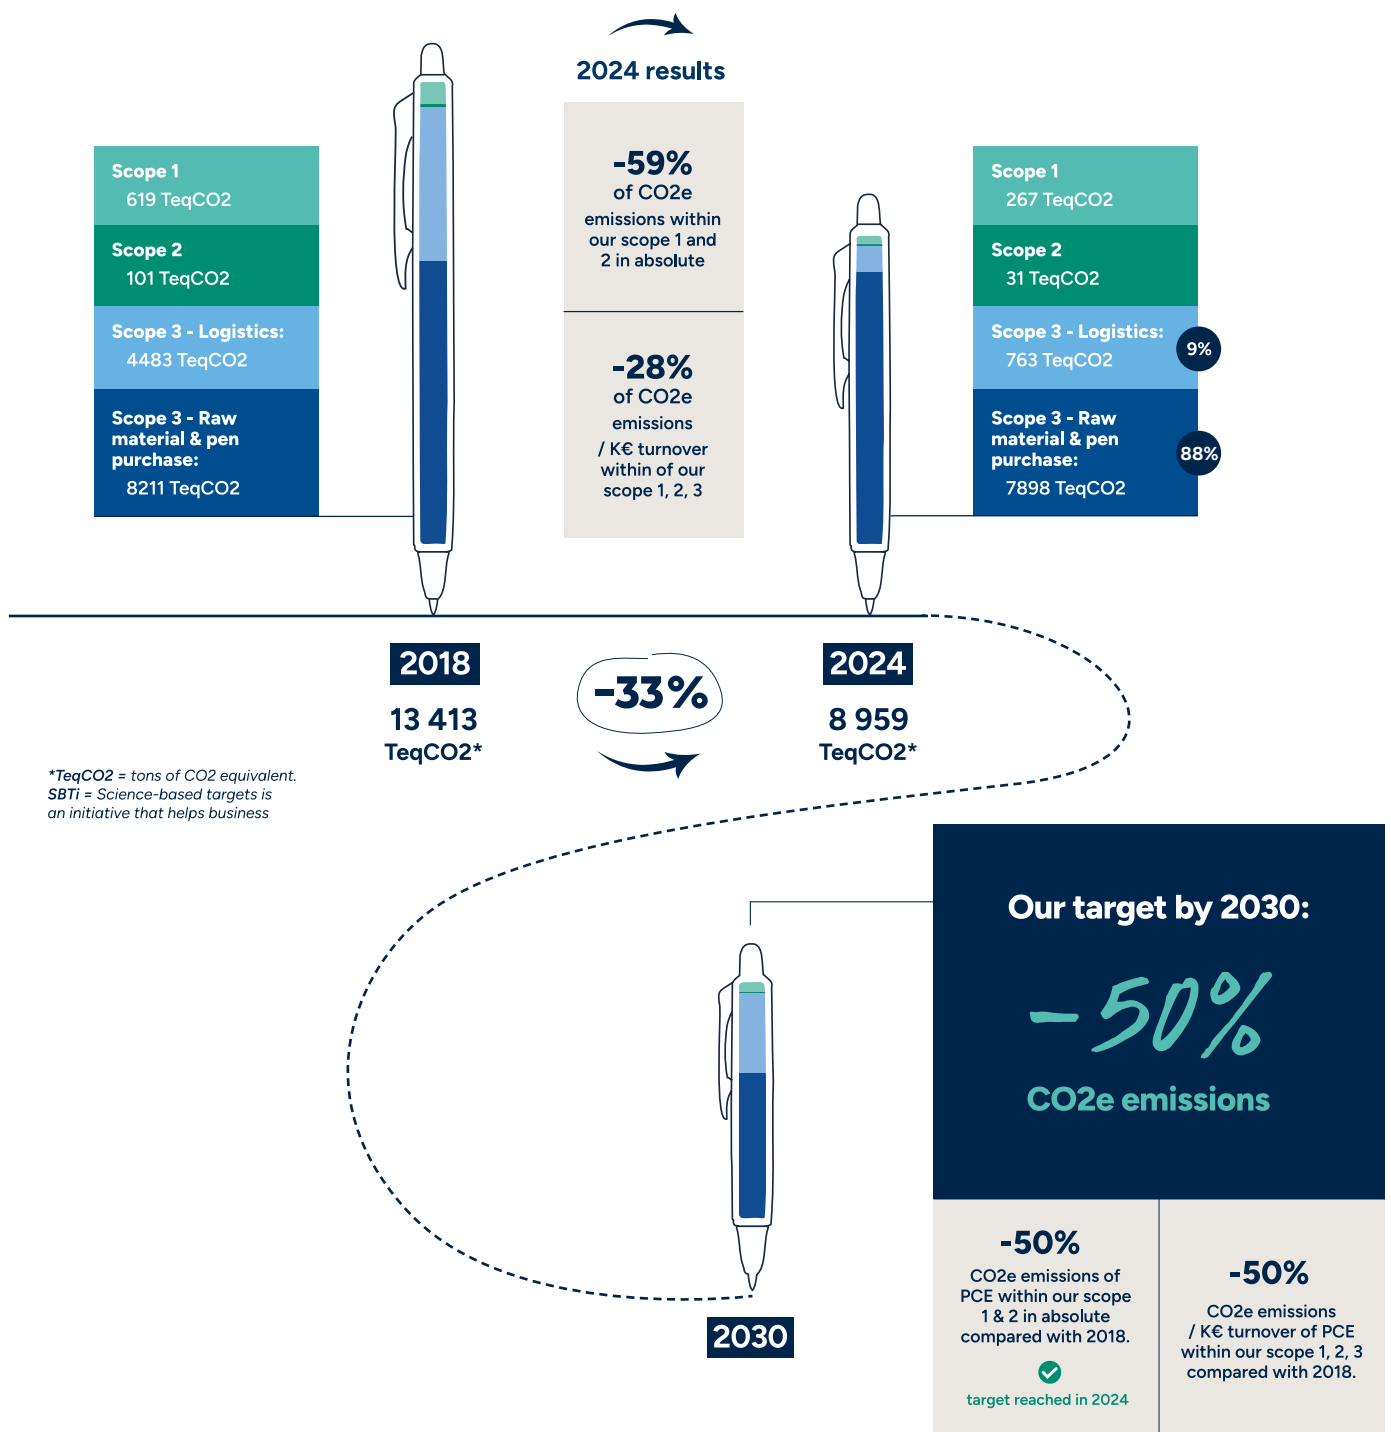

greenhouse gas emissions of Pilot Corporation of Europe.

Our ambition is to align our carbon reduction targets in order to limit global warming to 1.5° and meet the 2015 Paris Agreement.

Our next challenge will be to submit our target to SBTi* and obtain their official validation.

**TeqCO2 = tons of CO2 equivalent.
SBTi = Science-based targets is an initiative that helps business to set ambitious decarbonization roadmap.*

pursue high
quality & reliability
standards:
a prerequisite
to ecodesign!

WHAT WE DO

We perform 3 types of controls during the manufacture of a pen

Visual:
checks linked to the appearance of a product.

Writing:
tests to control writing lengths, colors, ink flow.

Mechanism:
endurance test to evaluate the resistance and the proper functioning of a pen.

100% of refills made by Pilot Corporation of Europe are tested to guarantee smooth writing.

From design to hand

On average, a Pilot pen undergoes **a 119 points of control to guarantee the quality of our pens.**

Every day, around 6,600 products (pens, blister packs, boxes...) are inspected directly in production workshops.

BEGREEN

In 2006 we launched our Begreen range:
the first range of pens made from at least:

70%
recycled plastic*

*excluding refills and non-plastic components.

All our Begreen ranges are
certified by Japan ECOMARK

Pilot online.

Digitalization is a key focus of our mid-term strategy. To support this transformation, PCE provides various tools to strengthen collaboration and brand visibility: the Extranet and Shared Media Server help teams work better together, while our corporate websites and social media content promote our brand and showcase key products to our communities.

We are also expanding our presence in e-commerce through a Product Information Management system (PIM), a B2B platform, and a direct-to-consumer eshop. These digital tools are essential to keep pace with the market and stay competitive in today's world.

Shared media server.

This platform gives you access to over 3,000 photos and videos for social media and business use.

Easily search and download content by theme (school, work, home...) to support your local campaigns and presentations with high-quality visuals.

<https://media-pce.netexplorer.pro/>

Extranet.

The PCE Extranet is your main 24/7 resource for all marketing and graphic content.

It offers high-resolution images, POS materials, logos, catalogues, digital assets, posters, and brand guidelines.

You can easily search using EAN codes or keywords and download all necessary files, including print-ready versions - all tailored to the European market.

<https://extranet.pilotpen.eu/>

Corporate website.

Our new corporate website is a powerful tool for promoting the Pilot brand. Already launched in over 20 countries, it presents the brand and our main product ranges in an attractive and modern way.

The site includes demo videos of our best-sellers and new writing instruments. Content is regularly updated with new visuals, banners, and product images to improve user experience.

If your country doesn't have the corporate website yet, please contact the PCE Digital Team.

www.pilotpen.eu

Product information management (PIM).

Our PIM database provides accurate and up-to-date product information: technical details, logistics data, marketing content, and e-commerce materials for all European Pilot products.

With our new Akeneo platform, it's easier than ever to access and share reliable product data. The PIM is connected to most Pilot websites and allows quick exports to support your partners.

Need help? Contact the PIM coordinator for an online training session or user guide.

<https://pim-pce.cloud.akeneo.com>

Ecommerce websites.

image : user16289356

PCE's e-commerce websites are powerful tools to support and grow your local sales.

The B2B platform, dedicated to resellers, provides a secure and efficient way to place orders online. It fully integrates your local business conditions such as payment terms, discounts, pricing, and delivery addresses.

Available 24/7 and built on advanced technology, it automates the ordering process — saving time and reducing errors.

www.pilotpen-pro.fr

The D2C (Direct-to-Consumer) website enables us to sell PILOT products directly to end users. It showcases an extended product range, shortens time-to-market, improves understanding of the customer journey, and transforms digital media investments into direct sales.

It's a key asset to develop revenue, reach local marketplaces more easily, and benefit from centralized tech and logistics flows.

www.pilotpen.se

Interested in launching the B2B and/or D2C platform in your country? Please contact the PCE Digital Team.

Social media publishing platform.

To become a true leader in our category, we need to increase our visibility where our consumers are: on social media. It's essential to create emotion, generate engagement, and connect with our audience.

With Hootsuite, PCE provides you with ready-to-use, high-quality content for Instagram and TikTok.

You can easily:

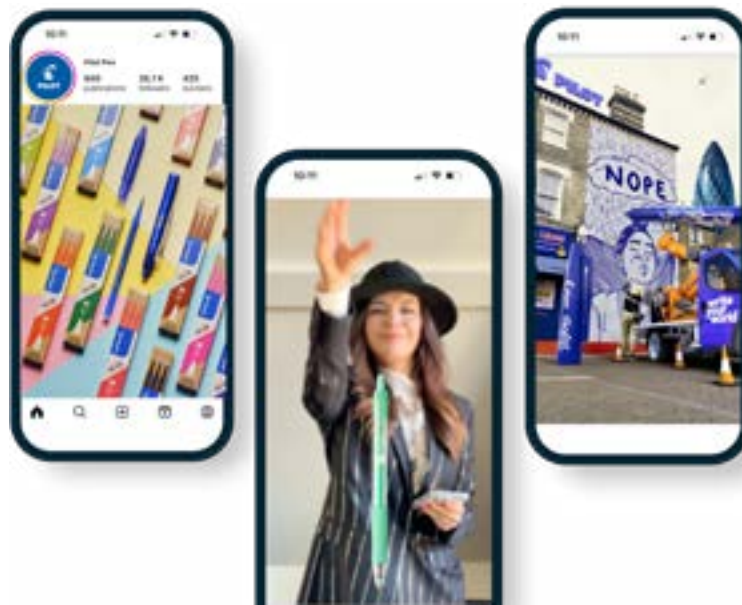

- Adapt the suggested content to fit your local needs,
- Schedule posts in advance,
- Or even create and publish your own content.

Every month, you'll find more than 12 Instagram posts and 12 TikTok videos prepared for you.

We encourage you to make the most of this content and boost visibility by publishing and promoting it to grow your social media communities across Europe.

If you haven't received your Hootsuite access yet, please contact the PCE Digital Team.

A

ATT System (Air Tight Through): Integrated into the cap, this system makes it possible to keep the pen in a completely sealed, airtight environment, thus guaranteeing the pen is ready to use immediately and in complete safety. It is sort of a cap within a cap.

C

Cleaning unit: Metallic piece making it possible to clean the Parallel Pen before changing the ink colour. It is filled with water then through pressure it is used like a refill and removes ink residue.

Correction tape: An easy to use tape which does not blot, our correction tape provides high quality coverage, making it possible to correct perfectly with total invisibility on a photocopy or fax.

D

Dimples on the tip: This technique makes it possible to assemble the ball and tip of the pen. This stage is very important because the reliability and smooth rotation of the ball depends on it. On the majority of pens, the tip has four dimples. On our fine Hi-tecpoints, the ball is set in only three dimples (exclusive to PILOT) allowing greater freedom for the ball to rotate.

E

Eraser (Integrated Eraser): The majority of our mechanical pencils have an eraser. This can easily be replaced in the event of wear and tear.

F

Full Sliding Sleeve: The sleeve is the metallic tube allowing the lead to slide inside the end of the mechanical pencil. On our mechanical pencils this sleeve slides inside the cone to protect it and prevent it from bending, which makes the product unusable. It also makes transporting the pencil easier by preventing it from damaging or piercing pockets or objects.

G

Grip (Ergonomic Grip): located on the pen's barrel at the point where the pen is held allows it to be held more comfortably and avoid the strain that can occur after writing for long periods. There are various forms and different thicknesses.

I

Ink (Acroball Ink): The ultimate development in low viscosity ink. This oil based ink is at the leading edge of ball point pens (for its ease of use) and liquid ink rollerballs (for the way it glides across the paper). It gives a denser colour, an almost instant drying time and is water resistant. Only available for the Acroball Plastic & Metal pen & COUPE and Dr Grip Pure White & Full Black.

Ink (Bio-Polymer Gel Ink): The fluidity of this gel ink has been improved thanks to the use of a bio-polymer. Mainly used in needle-point products, this technological advance is vital for providing a perfect flow of ink to the paper.

Ink (Direct Ink System): A system without cartridges. The ink is injected directly into the barrel of the pen to save on materials and give greater autonomy.

Ink (Dry wipe Ink): Specially developed to write on white boards, this ink contains an alcohol base. It gives a strong colour as well as being easy to erase. To retain all the qualities of our dry wipe markers, it is recommended that the caps are replaced firmly and they are stored horizontally.

Ink (Dye Ink): The use of permanent ink colouring molecules in the majority of our gel and liquid ink rollerballs is one of PILOT's major specialities. This technology provides a reliable ink flow because there are no particles to hinder the ball's rotation. Furthermore, unlike with pigment inks there is an infinite range of possible colours.

Ink (Erasable Ink): This generally blue ink is made up of an organic dye. It can be erased because it is destroyed when it comes into contact with the sodium bisulphite, which is contained in the ink erasers. Therefore, it is not a physical removal of the ink, but a chemical reaction which transforms the coloured ink into a colourless ink. Our V-Pen range of fountain pens has 8 colours of erasable ink.

Ink (Gel Ink): Gel ink is an ink resulting from a blend of oil and water. It is halfway between a low viscosity ink and a liquid ink. Gel ink cartridges are blocked with a paraffin plug to ensure air tightness. The ultra quick rotation of the ball liquefies the ink by warming it. It is an extremely smooth ink with an amazing colour.

Ink (Liquid Ink): Liquid ink is a water based ink. This exceptional smoothness provides unrivalled benefits in the world of writing: it flows instantaneously, a perfectly controlled ink flow, great fluidity, and record autonomy. It provides maximum comfort. When flow is controlled by the PILOT ink regulator (see Ink Regulator), it flows until the very last drop with the same line quality. Today, this ink is available in refillable cartridges for some rollerball models.

Ink (Metamo Ink - FriXion): Exclusive to Pilot, this thermo sensitive gel ink can be completely erased through friction. A plastic, hardwearing tip is placed at the end of the pen to rub the paper with. You can then immediately re-write with the same pen. This action can be repeated an infinite number of times. The ink's operating range is between -10°C and +60°C. Several minutes in a very cold place (such as a freezer) can make the erased line reappear.

Ink (Multi Surface Ink): This water based permanent ink can be used to write easily on the majority of surfaces such as plastic, metal, glass, wood or ceramics as well as on paper or card. This permanent, odourless ink, can however be removed during the first few hours using a damp cloth.

Ink (Oil Based Ink): This ink, used in our ball point pens is a low viscosity ink. Our research has enabled us to make it less viscose. This gives better ball rotation and therefore greater writing ease.

Ink (Ink Pad): This technology is relatively old. It consists of injecting the liquid ink into a fibre pad. The versatility of this system makes it possible to apply it to many writing instruments such as felt tips, markers or even highlighters. Products such as the Fineliner, Spotlitter Twin or even the CD Markers or SCAN-UF/EF use this technology.

Ink (Permanent Ink): This alcohol based ink is guaranteed without Xylene for the great majority of our permanent markers (except the Paint Marker). It has a very quick drying time, does not smell and is highly water resistant. It binds totally to the majority of surfaces, such as paper, card, glass, metal, wood, ceramics, etc. In the case of gold, silver and white markers, these must be shaken before use with the cap on and the pen upright. In order to start applying the ink on the medium, the marker tip must be pressed 3 or 4 times. To retain all the qualities of our gold and silver markers, it is recommended that the caps are replaced firmly and they are stored horizontally.

Ink (Pigment Ink): In old writing technology, pigments were used to create rock paintings. They are composed of a fine powder of plant, metallic or mineral origin, suspended in a solvent (generally water or alcohol). The pigments present in liquid or gel ink colour the medium. This system makes the inks highly water and light resistant and therefore the writing lasts much longer on the paper.

Ink (Ink Regulator / Ink Controller): Enables the ink to move to the tip with great consistency, this complex piece made up of micro ridges allows the momentary storage of surplus ink to avoid any risk of leaks during variations in pressure.

Ink (Secure): Forgery-proof ink: Many of our products are certified for use on official documents. For this purpose, they observe the following standards: ISO 12757-2 (ballpoint pens and refills), ISO 27668-2 (gel ink rollers and refills) & ISO 14145-2 (liquid ink rollers and refills), which guarantees that all tests have been performed in optimum conditions.

Ink (Textile Ink): Water based ink designed for writing on textiles. In order to set the ink on the fabric, you will need to iron it into position for 1 minute. Washing machine resistant. Best used on cotton fabrics.

Ink (Visible Level): On the majority of our products, part of the ink reservoir is visible so that the quantity of available ink can always be monitored and for example, the incredible smoothness of liquid ink can also be assessed.

Ink (Water-based pigmented): This ink allows you to write on any surface. Used in markers as Pilot Pintor, paint is permanent on porous surfaces as fabrics, ceramics, wood, card, paper... On surfaces as glass, metal a special varnish is recommended.

L

Lead (grade): The grade (the degree of hardness) of the leads is defined according to the scale below:

+ soft		Hardness								+ hard	
5B	4B	3B	2B	B	HB	F	H	2H	3H	4H	5H
+ dark				Colour intensity				+ light			

•H (hard): hard •HB (hard black): medium
•B (black): soft •F (fine point): fine

A hard lead is dry, precise and durable, but produces a rather grey colour. On the contrary, a soft lead is oily with a true blackness, but is used up quickly.

Leads contain clay and graphite. A soft lead contains less clay and a hard one less graphite. Graphite provides the "oiliness" in the lead through its lubricating power, while clay is a lean load. The HB model is the most widely used today because of its neutrality.

Lead (High density Lead): An improved manufacturing formula for increased breakage resistance in comparison to a traditional lead through the use of a polymer.

M

Metal mouth piece: This metal piece located at the mouth of the pen gives increased strength between the tip and the barrel of the product, at the place where pressure is greatest during writing.

Multiple channel irrigation: This special feature of our felt tips gives a constant ink flow, whatever the angle of the tip on the paper.

N

Nib (Chisel Nib): A fountain pen nib cut square makes it possible to string together rounded and slender letters and make the art of calligraphy as simple as possible.

Nib (Double-Blade Nib): Used exclusively on the Parallel Pen, this is made of two parallel steel blades with a square section, between which the ink flows through miniature channels. This technology makes it possible to create rounded and slender letters very simply and much more aesthetically than the majority of calligraphy pens. The different line widths are obtained not only from the width of the blades but also from the angle of the pen. The use of two Parallel Pens makes it possible to create an ink deposit from one fountain pen on the other. The mixable inks then give an incredible colour on the medium.

Nib (Retractable Nib): A resolutely innovative writing concept, the Capless (and Décimo) retractable fountain pen is the only retractable fountain pen in the world. The seal is provided by a minuscule metal shutter which is as discreet as it is reliable. The nib is therefore kept in a sealed environment avoiding the risk of leaks or the ink drying out. This technical solution enables the daily use of a top of the range fountain pen with the ease of a retractable product and the incredible writing comfort which results from the nib.

Nib (Stainless Nib): For increased strength and impeccable quality over time, our fountain pens are manufactured using steel. They form part of Pilot's 90 years of expertise.

Nickel plated brass metal shank support: A nickel collar is integrated around the tip of our finest felt tips. This gives increased strength at the place where pressure is greatest during writing.

P

Point (Hi-Tecpoint / Needlepoint): The Hi-Tecpoint uses a metal tube rather than a cone. This gives greater precision in the stroke and 3 dimples in the fine points (0.5mm maximum) enables smoother writing (see Dimples in the tip).

R

Refill (DIN Refill): This acronym means that the refills used with the product are standardised and work with the majority of fountain pens manufactured throughout the world, across all brands. This applies to cartridges used with our Plumix, Pluminix and Vortex models. Furthermore, our gel ink and liquid ink refills also satisfy the DIN standard.

Refill (Vacuum Refill): This refill equipped with liquid ink makes it possible to discover the sensations of ink regulator products. The ink is stored in a vacuum after its injection into the refill so that it is unaffected by any change in air pressure, especially in planes where it is guaranteed anti-leak. The gel ink also takes advantage of this technology across the entire range.

S

Safety: The majority of the barrels used in our products have been designed for maximum safety. So the caps on our non-retractable writing models satisfy the ISO 11540 standard. They are equipped with a ventilation system allowing breathing in case the cap is ingested. This relates to a micro hole in the cap or even a specific design allowing sufficient air flow.

Shaker System: The shaker system gives an unrivalled ease of use. Shake your Shaker system equipped mechanical pencil and the lead comes out of its own accord thanks to the integration of a feeder into the product barrel. Of course, it is also possible to use the normal push button to get the lead to come out.

T

Tip (Acrylic Fibre Tip): This highly resistant fibre tip gives a soft and smooth contact with the medium. It is used especially in our wide tip markers, thus increasing writing comfort.

Tip (Chisel Tip): Often used in highlighters, the chisel tip makes it possible to work with several line widths using the same, single tip. Relatively practical for producing made to measure lines.

Tip (Conical Tip): The conical variation for supporting the ball in our pens, this is the most widely used version throughout the world.

Tip (Polyacetal Tip): This synthetic material gives increased strength to the tip, notably used on the finest tips because they are very fragile.

Tip (Polyester Fibre Tip): This synthetic fibre tip gives an impeccable smoothness to the tip and perfect ink flow.

TPF System (Twin Pipe Feeder System): The TPF is the system which makes it possible to regulate the ink flow in our liquid ink markers V-Board Master and V-Super Color. Two parallel tubes manage the air pressure entering the marker during its use. This regulator means that liquid ink can be used (see Liquid Ink) with all its resulting qualities.

Tungsten Carbide Ball: Notably used in drill bits, this material offers exceptional strength. It guarantees that the ball keeps its round shape and performance throughout the entire life of the pen.

Twist System: Specially dedicated to Ageless, this Exclusive "Double Twist" mechanism that lets the point come out in two stages. Elegant and practical, it gives to the pen a real alternative concept.

V

V-System: All Pilot's liquid ink products are brought together under the V-System label. Easily recognisable, their name always starts with a V. (e.g.: V-Ball). The GreenTecpoint and Greenball are the only exceptions to this rule. The Pure Liquid Ink logo is also affixed to the product body.

ENVIRONMENTAL GLOSSARY

Eco Design: Procedure aimed at considering the environmental impact of a product from its design in order to reduce it. All components are included (use of material, end of life, transport, production...) and can notably impact the design of the product or even its production method.

ECOMARK: Japanese eco label for writing instruments. Created in 1995, it is one of the oldest for our product category. It is the benchmark in the writing world particularly by imposing the use of recycled materials. All the products in the BEGREEN range strictly observe the ECOMARK criteria.

ISO 14001: Standard relating to the environmental management of companies. This involves measuring a company's environmental impact, establishing improvement objectives and measuring their success. This certification, renewable every two years, requires continuous improvement of the company's environmental impact. This standard does not relate to the products, but more particularly the production process.

Möbius Curve (or Möbius Loop / Möbius Strip): Since 1970 this symbol has been used to inform people whether a product is recyclable (single curve) or whether it contains recycled materials (curve + percentage of recycled material). Used throughout the world, it provides every one of us with accurate and easily understandable information about a product's environmental nature.

Recyclable: A product is said to be recyclable if its materials can be reprocessed in the recycling process. In France today, no pens are recyclable. After sorting household waste, only "bottles" (water bottles, milk bottles, drinks bottles, detergent bottles...) are recyclable in terms of plastic materials.

To find out if a product is recyclable, simply look to see if a Möbius Curve (without percentage) is present on the product.

Recycled: Recycled materials are materials which come from other products and have been reprocessed in order to be reused in new products. Using recycled materials makes it possible to avoid the use of raw materials from fossil fuel energy. In our case, it is plastic which is recycled. Since plastic is made up of 99% oil, by using recycled plastic we avoid using this energy because we know that reserves are coming to an end.

To find out the recycled content of a product, simply look at the Möbius Curve and the percentage next to it.

The calculation of the percentage of recycled material in our products obviously excludes refills, the ink, erasers and even leads (in the case of a mechanical pencil).
